

Deerfield.com Concludes that IceWarp Server is the Best Choice in Unified Communications

Sporting a superior feature set, resource awareness, and ease of management, IceWarp Server is a recognized messaging and communications leader.

Washington D.C. Metro Area – July 1, 2009 – Deerfield.com, software and solutions provider to the SMB market, announced today that it will now distribute IceWarp Server directly. The company originally discovered IceWarp Server in 2001 after conducting a full evaluation of the mail server market. Deerfield.com had conducted a number of benchmark tests – and was consistently amazed by IceWarp's performance.

“Our engineers were extremely impressed with IceWarp Server’s performance,” said Mike Deerfield, CEO of Deerfield. “It provided a rich feature set, yet was extremely easy to manage and consistently delivered enormous power and stability, while consuming minimal system resources. This remains true today.”

For the past seven years Deerfield.com has distributed VisNetic MailServer, a product developed based on IceWarp Mail Server technology, which has consistently performed for customers. Today, Deerfield.com is transitioning to IceWarp Server in order to give customers direct access to the latest features and enhancements, and to work alongside IceWarp in to promote and support IceWarp Server. “IceWarp has a strong name in the industry,” continued Deerfield, “and produces a phenomenal product. It offers real value to Deerfield.com customers – and now offers even more, because our customers will have immediate access to IceWarp's latest releases.”

More than a messaging platform, IceWarp Server is a comprehensive *unified communications* solution, incorporating, email, webmail, antispam, antivirus, groupware with Outlook synchronization, instant messaging server and gateway, VoIP, FTP server, web server, server migration tool, SMS server – and soon, integration of Exchange ActiveSync for wireless synchronization of Windows Mobile devices, iPhone, and more.

“We appreciate Deerfield.com’s trust in IceWarp Server,” said IceWarp CEO Christopher Grady. “And we’re pleased that our platform has given so much value to Deerfield customers for so many years. VisNetic users will find migration to IceWarp Server extremely easy – and those that upgrade to upcoming Version 10, will be a generation ahead of competing solutions.”

When asked how both companies have handled the current turbulence in business and global economics, both hearken to the same principle that a **future-proof** solution must be **flexible**, **scalable** and **sustainable** in order to succeed – and IceWarp achieves all three in its unified communications platform, IceWarp Server.

About IceWarp
